Part 7: Fares and revenue ..... page 80

Part 8: Conduct and incidents ..... page 86

Part 9: Amendments ..... page 94

Part 10: Glossary and contacts ..... page 97

How to use this manual

This manual applies to all employees of Ashgrove Regional Transit. Parts 1 to 3 describe depots, routes and vehicles. Part 4 covers pay and leave. Parts 5 and 8 cover safety and conduct.

Part 9 contains amendments. When an amendment conflicts with an earlier section, the amendment applies.

Questions about this manual should be sent to the safety director or the head of human resources, whose contacts are listed in section 10.4.

1.1 Larkfield Depot

Larkfield Depot (depot code LKF) is located at 14 Quarry Road. The Larkfield depot manager is Imani Okafor. The Larkfield safety officer is Tomasz Wrona. The Larkfield gatehouse is staffed from 04:30 to 00:45, seven days a week.

Larkfield has 62 parking bays. Larkfield has 18 charging points. The speed limit inside the Larkfield yard is 12 km/h. The Larkfield duty desk is reached on extension 4101.

Services operated from Larkfield are Route 5, Route 31. Rosters are published on the staff portal every second Thursday and printed copies are displayed in the mess room.

All staff entering the yard sign in at the gatehouse using a personal identity card. Visitors are escorted at all times and are issued with a temporary pass that must be returned before leaving the site. Contractors must show a current site induction record before any work begins, and the record is checked against the contractor register held by the duty desk.

Vehicles returning at the end of service are refuelled or placed on charge, cleaned, and parked according to the allocation sheet for the following morning. Any defect noticed during the shift is written on the defect card and handed to the night maintenance team, who decide whether the vehicle is fit for the next duty.

Larkfield Depot local operating notes

Local rule at Larkfield: Buses over 12 metres must enter through Gate B because Gate A has a 3.4 metre height bar.

Local rules are agreed between the depot manager and the safety officer and are reviewed at the quarterly depot safety meeting. Changes take effect only after they have been posted on the depot notice board for seven days. If a local rule appears to conflict with a procedure in Part 5 of this manual, the stricter of the two applies until the safety team has given a ruling.

The mess room is open throughout gatehouse hours and contains lockers, a kitchen area and a quiet room. Lockers are allocated by the duty desk and are emptied after an employee has left the depot. Personal items are left at the owner’s risk, and valuables should not be kept in vehicles at any time.

New drivers complete a route familiarisation drive for each service operated from the depot before taking passengers. A driver who has not operated a route for six months repeats the familiarisation drive before returning to that route. Records of these drives are held by the duty desk and are checked when rosters are prepared.

The first vehicle of the morning undergoes a walk-round check witnessed by the shift supervisor. The check covers tyres, lights, mirrors, doors, the ramp and the emergency exits. Later vehicles are checked by the driver alone and the result is recorded on the handheld ticket machine.

Waste oil, coolant and tyres are stored in the marked compound and collected by an approved contractor. Spills are dealt with according to the procedures in Part 5, and the depot keeps absorbent materials next to each fuelling point.

1.2 Tolland Depot

Tolland Depot (depot code TLD) is located at 220 Mill Lane. The Tolland depot manager is Rafael Quintero. The Tolland safety officer is Saoirse Byrne. The Tolland gatehouse is staffed from 04:15 to 01:00, seven days a week.

Tolland has 88 parking bays. Tolland has 44 charging points. The speed limit inside the Tolland yard is 10 km/h. The Tolland duty desk is reached on extension 4102.

Services operated from Tolland are Route 7, Route 33. Rosters are published on the staff portal every second Thursday and printed copies are displayed in the mess room.

All staff entering the yard sign in at the gatehouse using a personal identity card. Visitors are escorted at all times and are issued with a temporary pass that must be returned before leaving the site. Contractors must show a current site induction record before any work begins, and the record is checked against the contractor register held by the duty desk.

Vehicles returning at the end of service are refuelled or placed on charge, cleaned, and parked according to the allocation sheet for the following morning. Any defect noticed during the shift is written on the defect card and handed to the night maintenance team, who decide whether the vehicle is fit for the next duty.

Tolland Depot local operating notes

Local rule at Tolland: The wash line closes every Tuesday from 09:00 to 12:00 for water recycling checks.

Local rules are agreed between the depot manager and the safety officer and are reviewed at the quarterly depot safety meeting. Changes take effect only after they have been posted on the depot notice board for seven days. If a local rule appears to conflict with a procedure in Part 5 of this manual, the stricter of the two applies until the safety team has given a ruling.

The mess room is open throughout gatehouse hours and contains lockers, a kitchen area and a quiet room. Lockers are allocated by the duty desk and are emptied after an employee has left the depot. Personal items are left at the owner’s risk, and valuables should not be kept in vehicles at any time.

New drivers complete a route familiarisation drive for each service operated from the depot before taking passengers. A driver who has not operated a route for six months repeats the familiarisation drive before returning to that route. Records of these drives are held by the duty desk and are checked when rosters are prepared.

The first vehicle of the morning undergoes a walk-round check witnessed by the shift supervisor. The check covers tyres, lights, mirrors, doors, the ramp and the emergency exits. Later vehicles are checked by the driver alone and the result is recorded on the handheld ticket machine.

Waste oil, coolant and tyres are stored in the marked compound and collected by an approved contractor. Spills are dealt with according to the procedures in Part 5, and the depot keeps absorbent materials next to each fuelling point.

1.3 Corran Street Depot

Corran Street Depot (depot code CRS) is located at 3 Corran Street. The Corran Street depot manager is Mei-Ling Hsu. The Corran Street safety officer is Adebayo Lawal. The Corran Street gatehouse is staffed from 05:00 to 23:30, seven days a week.

Corran Street has 41 parking bays. Corran Street has 12 charging points. The speed limit inside the Corran Street yard is 8 km/h. The Corran Street duty desk is reached on extension 4103.

Services operated from Corran Street are Route 9. Rosters are published on the staff portal every second Thursday and printed copies are displayed in the mess room.

All staff entering the yard sign in at the gatehouse using a personal identity card. Visitors are escorted at all times and are issued with a temporary pass that must be returned before leaving the site. Contractors must show a current site induction record before any work begins, and the record is checked against the contractor register held by the duty desk.

Vehicles returning at the end of service are refuelled or placed on charge, cleaned, and parked according to the allocation sheet for the following morning. Any defect noticed during the shift is written on the defect card and handed to the night maintenance team, who decide whether the vehicle is fit for the next duty.

Corran Street Depot local operating notes

Local rule at Corran Street: Reversing in the north yard requires a banksman at all times because of the school next door.

Local rules are agreed between the depot manager and the safety officer and are reviewed at the quarterly depot safety meeting. Changes take effect only after they have been posted on the depot notice board for seven days. If a local rule appears to conflict with a procedure in Part 5 of this manual, the stricter of the two applies until the safety team has given a ruling.

The mess room is open throughout gatehouse hours and contains lockers, a kitchen area and a quiet room. Lockers are allocated by the duty desk and are emptied after an employee has left the depot. Personal items are left at the owner’s risk, and valuables should not be kept in vehicles at any time.

New drivers complete a route familiarisation drive for each service operated from the depot before taking passengers. Records of these drives are held by the duty desk and are checked when rosters are prepared.

The first vehicle of the morning undergoes a walk-round check witnessed by the shift supervisor. The check covers tyres, lights, mirrors, doors, the ramp and the emergency exits. Later vehicles are checked by the driver alone and the result is recorded on the handheld ticket machine.

Waste oil, coolant and tyres are stored in the marked compound and collected by an approved contractor. Spills are dealt with according to the procedures in Part 5, and the depot keeps absorbent materials next to each fuelling point.

2.1 Routes 3 and 5

Route 3: Harbour View to Central Station

Route 3 runs between Harbour View and Central Station and is operated from Penhale Depot. Route 3 is normally worked by class AT-3A vehicles. Route 3 runs every 6 minutes at peak times and every 12 minutes off-peak. The first departure on Route 3 is at 05:05 and the last departure is at 00:10.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

Route 5: Quarry Road to University

Route 5 runs between Quarry Road and University and is operated from Larkfield Depot. Route 5 is normally worked by class AT-4B vehicles. Route 5 runs every 8 minutes at peak times and every 15 minutes off-peak. The first departure on Route 5 is at 05:20 and the last departure is at 23:55.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

2.2 Routes 7 and 9

Route 7: Mill Lane to Riverside

Route 7 runs between Mill Lane and Riverside and is operated from Tolland Depot. Route 7 is normally worked by class AT-5E vehicles. Route 7 runs every 5 minutes at peak times and every 10 minutes off-peak. The first departure on Route 7 is at 04:50 and the last departure is at 00:30.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

Route 9: Corran Street to Old Town

Route 9 runs between Corran Street and Old Town and is operated from Corran Street Depot. Route 9 is normally worked by class AT-2M vehicles. Route 9 runs every 12 minutes at peak times and every 20 minutes off-peak. The first departure on Route 9 is at 05:45 and the last departure is at 23:10.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

2.3 Routes 11 and 14

Route 11: Beacon Hill to Central Station

Route 11 runs between Beacon Hill and Central Station and is operated from Wexcombe Depot. Route 11 is normally worked by class AT-3A vehicles. Route 11 runs every 15 minutes at peak times and every 30 minutes off-peak. The first departure on Route 11 is at 06:00 and the last departure is at 22:40.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

Route 14: Foundry Way to Eastgate Mall

Route 14 runs between Foundry Way and Eastgate Mall and is operated from Marlstone Depot. Route 14 is normally worked by class AT-6D vehicles. Route 14 runs every 4 minutes at peak times and every 9 minutes off-peak. The first departure on Route 14 is at 04:35 and the last departure is at 00:55.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

2.4 Routes 16 and 18

Route 16: Orchard Rise to City Hospital

Route 16 runs between Orchard Rise and City Hospital and is operated from Ferndown Park Depot. Route 16 is normally worked by class AT-2M vehicles. Route 16 runs every 10 minutes at peak times and every 20 minutes off-peak. The first departure on Route 16 is at 05:50 and the last departure is at 22:55.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

Route 18: Viaduct Road to Northern Terminal

Route 18 runs between Viaduct Road and Northern Terminal and is operated from Glenarrow Depot. Route 18 is normally worked by class AT-5E vehicles. Route 18 runs every 7 minutes at peak times and every 14 minutes off-peak. The first departure on Route 18 is at 04:55 and the last departure is at 00:25.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

2.5 Routes 22 and 24

Route 22: Canal Wharf to Technology Park

Route 22 runs between Canal Wharf and Technology Park and is operated from Bramwell Depot. Route 22 is normally worked by class AT-7C vehicles. Route 22 runs every 9 minutes at peak times and every 18 minutes off-peak. The first departure on Route 22 is at 05:15 and the last departure is at 23:35.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

Route 24: Market Row to Westfield

Route 24 runs between Market Row and Westfield and is operated from Sutter Cross Depot. Route 24 is normally worked by class AT-4B vehicles. Route 24 runs every 11 minutes at peak times and every 22 minutes off-peak. The first departure on Route 24 is at 05:40 and the last departure is at 23:05.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

2.6 Routes 27 and 29

Route 27: Airfield Drive to International Airport

Route 27 runs between Airfield Drive and International Airport and is operated from Oakhampton Depot. Route 27 is normally worked by class AT-8X vehicles. Route 27 runs every 13 minutes at peak times and every 13 minutes off-peak. The first departure on Route 27 is at 03:58 and the last departure is at 01:22.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

Route 29: Copper Lane to Central Station

Route 29 runs between Copper Lane and Central Station and is operated from Thornbury Vale Depot. Route 29 is normally worked by class AT-3A vehicles. Route 29 runs every 14 minutes at peak times and every 25 minutes off-peak. The first departure on Route 29 is at 05:35 and the last departure is at 22:50.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

2.7 Routes 31 and 33

Route 31: Quarry Road to Lakeside

Route 31 runs between Quarry Road and Lakeside and is operated from Larkfield Depot. Route 31 is normally worked by class AT-2M vehicles. Route 31 runs every 16 minutes at peak times and every 32 minutes off-peak. The first departure on Route 31 is at 06:05 and the last departure is at 22:20.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

Route 33: Mill Lane to Southern Cross

Route 33 runs between Mill Lane and Southern Cross and is operated from Tolland Depot. Route 33 is normally worked by class AT-6D vehicles. Route 33 runs every 6 minutes at peak times and every 11 minutes off-peak. The first departure on Route 33 is at 04:40 and the last departure is at 00:40.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

2.8 Routes 36 and 38

Route 36: Foundry Way to Stadium

Route 36 runs between Foundry Way and Stadium and is operated from Marlstone Depot. Route 36 is normally worked by class AT-7C vehicles. Route 36 runs every 8 minutes at peak times and every 16 minutes off-peak. The first departure on Route 36 is at 05:10 and the last departure is at 00:05.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

Route 38: Viaduct Road to Kingsway

Route 38 runs between Viaduct Road and Kingsway and is operated from Glenarrow Depot. Route 38 is normally worked by class AT-4B vehicles. Route 38 runs every 10 minutes at peak times and every 19 minutes off-peak. The first departure on Route 38 is at 05:25 and the last departure is at 23:45.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

2.9 Routes 41 and 44

Route 41: Canal Wharf to Ferry Terminal

Route 41 runs between Canal Wharf and Ferry Terminal and is operated from Bramwell Depot. Route 41 is normally worked by class AT-3A vehicles. Route 41 runs every 17 minutes at peak times and every 34 minutes off-peak. The first departure on Route 41 is at 06:15 and the last departure is at 22:10.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

Route 44: Airfield Drive to Business Park

Route 44 runs between Airfield Drive and Business Park and is operated from Oakhampton Depot. Route 44 is normally worked by class AT-5E vehicles. Route 44 runs every 12 minutes at peak times and every 24 minutes off-peak. The first departure on Route 44 is at 05:00 and the last departure is at 23:30.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

2.10 Routes 47 and 52

Route 47: Harbour View to Marina

Route 47 runs between Harbour View and Marina and is operated from Penhale Depot. Route 47 is normally worked by class AT-2M vehicles. Route 47 runs every 20 minutes at peak times and every 40 minutes off-peak. The first departure on Route 47 is at 06:30 and the last departure is at 21:45.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

Route 52: Copper Lane to Hillcrest

Route 52 runs between Copper Lane and Hillcrest and is operated from Thornbury Vale Depot. Route 52 is normally worked by class AT-4B vehicles. Route 52 runs every 18 minutes at peak times and every 36 minutes off-peak. The first departure on Route 52 is at 06:20 and the last departure is at 22:05.

Peak times are 07:00 to 09:30 and 16:00 to 18:30 on weekdays. Weekend timetables follow the off-peak frequency throughout the day unless a special event notice has been issued. Drivers must not depart a timing point early, and a departure more than 5 minutes late is reported to the controller.

Layover time at each terminal is used for a walk-round check, and passengers may remain on board if the driver stays with the vehicle. Diversions are announced by the controller over the radio and shown on the ticket machine display.

3.1 Vehicle class AT-2M

Class AT-2M is a midi bus for narrow streets. Class AT-2M entered service in 2019. Class AT-2M seats 24 passengers and carries up to 18 standing passengers. The overall length of class AT-2M is 8.9 metres. The energy system of class AT-2M is diesel, 180 litre tank.

Class AT-2M receives a scheduled inspection every 12000 km. Brake overhaul on class AT-2M takes place every 70000 km. Scheduled inspections are booked through the maintenance planning system and take priority over service allocation when a vehicle is within 500 km of its limit.

Drivers may operate a vehicle class only after completing the training listed for it in Part 6. The driver’s cab has a seat adjustment guide on the door pillar, and drivers should adjust the seat and mirrors before moving off. Warning lights on the dashboard are grouped into amber lights, which must be reported at the end of the trip, and red lights, which require the vehicle to be stopped as soon as it is safe.

Wheel nuts are checked by the maintenance team after any wheel change and again after the next 100 km of service. Tyres are replaced when tread depth reaches the limit set by the maintenance planning system, and regrooved tyres are never fitted to the front axle. Interior cleaning is carried out every night, with a deep clean every 28 days.

Passenger information screens are updated automatically each night at the depot. If a screen is faulty the driver must make route announcements by voice. All vehicles carry a fire extinguisher, a first aid kit, a high-visibility vest and an emergency hammer at each marked exit.

3.2 Vehicle class AT-3A

Class AT-3A is a standard single-deck diesel bus. Class AT-3A entered service in 2017. Class AT-3A seats 38 passengers and carries up to 32 standing passengers. The overall length of class AT-3A is 11.9 metres. The energy system of class AT-3A is diesel, 260 litre tank.

Class AT-3A receives a scheduled inspection every 15000 km. Brake overhaul on class AT-3A takes place every 90000 km. Scheduled inspections are booked through the maintenance planning system and take priority over service allocation when a vehicle is within 500 km of its limit.

Drivers may operate a vehicle class only after completing the training listed for it in Part 6. The driver’s cab has a seat adjustment guide on the door pillar, and drivers should adjust the seat and mirrors before moving off. Warning lights on the dashboard are grouped into amber lights, which must be reported at the end of the trip, and red lights, which require the vehicle to be stopped as soon as it is safe.

Wheel nuts are checked by the maintenance team after any wheel change and again after the next 100 km of service. Tyres are replaced when tread depth reaches the limit set by the maintenance planning system, and regrooved tyres are never fitted to the front axle. Interior cleaning is carried out every night, with a deep clean every 28 days.

Passenger information screens are updated automatically each night at the depot. If a screen is faulty the driver must make route announcements by voice. All vehicles carry a fire extinguisher, a first aid kit, a high-visibility vest and an emergency hammer at each marked exit.

3.3 Vehicle class AT-4B

Class AT-4B is a standard single-deck hybrid bus. Class AT-4B entered service in 2020. Class AT-4B seats 36 passengers and carries up to 34 standing passengers. The overall length of class AT-4B is 12.1 metres. The energy system of class AT-4B is hybrid, 210 litre tank and 28 kWh battery.

Class AT-4B receives a scheduled inspection every 18000 km. Brake overhaul on class AT-4B takes place every 110000 km. Scheduled inspections are booked through the maintenance planning system and take priority over service allocation when a vehicle is within 500 km of its limit.

Drivers may operate a vehicle class only after completing the training listed for it in Part 6. The driver’s cab has a seat adjustment guide on the door pillar, and drivers should adjust the seat and mirrors before moving off. Warning lights on the dashboard are grouped into amber lights, which must be reported at the end of the trip, and red lights, which require the vehicle to be stopped as soon as it is safe.

Wheel nuts are checked by the maintenance team after any wheel change and again after the next 100 km of service. Tyres are replaced when tread depth reaches the limit set by the maintenance planning system, and regrooved tyres are never fitted to the front axle. Interior cleaning is carried out every night, with a deep clean every 28 days.

Passenger information screens are updated automatically each night at the depot. If a screen is faulty the driver must make route announcements by voice. All vehicles carry a fire extinguisher, a first aid kit, a high-visibility vest and an emergency hammer at each marked exit.

3.4 Vehicle class AT-5E

Class AT-5E is a standard single-deck electric bus. Class AT-5E entered service in 2022. Class AT-5E seats 34 passengers and carries up to 36 standing passengers. The overall length of class AT-5E is 12.0 metres. The energy system of class AT-5E is electric, 422 kWh battery.

Class AT-5E receives a scheduled inspection every 25000 km. Brake overhaul on class AT-5E takes place every 140000 km. Scheduled inspections are booked through the maintenance planning system and take priority over service allocation when a vehicle is within 500 km of its limit.

Drivers may operate a vehicle class only after completing the training listed for it in Part 6. The driver’s cab has a seat adjustment guide on the door pillar, and drivers should adjust the seat and mirrors before moving off. Warning lights on the dashboard are grouped into amber lights, which must be reported at the end of the trip, and red lights, which require the vehicle to be stopped as soon as it is safe.

Wheel nuts are checked by the maintenance team after any wheel change and again after the next 100 km of service. Tyres are replaced when tread depth reaches the limit set by the maintenance planning system, and regrooved tyres are never fitted to the front axle. Interior cleaning is carried out every night, with a deep clean every 28 days.

Passenger information screens are updated automatically each night at the depot. If a screen is faulty the driver must make route announcements by voice. All vehicles carry a fire extinguisher, a first aid kit, a high-visibility vest and an emergency hammer at each marked exit.

3.5 Vehicle class AT-6D

Class AT-6D is a double-deck diesel bus. Class AT-6D entered service in 2018. Class AT-6D seats 78 passengers and carries up to 22 standing passengers. The overall length of class AT-6D is 10.8 metres. The energy system of class AT-6D is diesel, 340 litre tank.

Class AT-6D receives a scheduled inspection every 14000 km. Brake overhaul on class AT-6D takes place every 85000 km. Scheduled inspections are booked through the maintenance planning system and take priority over service allocation when a vehicle is within 500 km of its limit.

Drivers may operate a vehicle class only after completing the training listed for it in Part 6. The driver’s cab has a seat adjustment guide on the door pillar, and drivers should adjust the seat and mirrors before moving off. Warning lights on the dashboard are grouped into amber lights, which must be reported at the end of the trip, and red lights, which require the vehicle to be stopped as soon as it is safe.

Wheel nuts are checked by the maintenance team after any wheel change and again after the next 100 km of service. Tyres are replaced when tread depth reaches the limit set by the maintenance planning system, and regrooved tyres are never fitted to the front axle. Interior cleaning is carried out every night, with a deep clean every 28 days.

Passenger information screens are updated automatically each night at the depot. If a screen is faulty the driver must make route announcements by voice. All vehicles carry a fire extinguisher, a first aid kit, a high-visibility vest and an emergency hammer at each marked exit.

3.6 Vehicle class AT-7C

Class AT-7C is a articulated electric bus. Class AT-7C entered service in 2023. Class AT-7C seats 51 passengers and carries up to 74 standing passengers. The overall length of class AT-7C is 18.2 metres. The energy system of class AT-7C is electric, 640 kWh battery.

Class AT-7C receives a scheduled inspection every 22000 km. Brake overhaul on class AT-7C takes place every 125000 km. Scheduled inspections are booked through the maintenance planning system and take priority over service allocation when a vehicle is within 500 km of its limit.

Drivers may operate a vehicle class only after completing the training listed for it in Part 6. The driver’s cab has a seat adjustment guide on the door pillar, and drivers should adjust the seat and mirrors before moving off. Warning lights on the dashboard are grouped into amber lights, which must be reported at the end of the trip, and red lights, which require the vehicle to be stopped as soon as it is safe.

Wheel nuts are checked by the maintenance team after any wheel change and again after the next 100 km of service. Tyres are replaced when tread depth reaches the limit set by the maintenance planning system, and regrooved tyres are never fitted to the front axle. Interior cleaning is carried out every night, with a deep clean every 28 days.

Passenger information screens are updated automatically each night at the depot. If a screen is faulty the driver must make route announcements by voice. All vehicles carry a fire extinguisher, a first aid kit, a high-visibility vest and an emergency hammer at each marked exit.

3.7 Vehicle class AT-8X

Class AT-8X is a airport shuttle coach with luggage racks. Class AT-8X entered service in 2024. Class AT-8X seats 44 passengers and carries up to 12 standing passengers. The overall length of class AT-8X is 13.2 metres. The energy system of class AT-8X is electric, 560 kWh battery.

Class AT-8X receives a scheduled inspection every 30000 km. Brake overhaul on class AT-8X takes place every 160000 km. Scheduled inspections are booked through the maintenance planning system and take priority over service allocation when a vehicle is within 500 km of its limit.

Drivers may operate a vehicle class only after completing the training listed for it in Part 6. The driver’s cab has a seat adjustment guide on the door pillar, and drivers should adjust the seat and mirrors before moving off. Warning lights on the dashboard are grouped into amber lights, which must be reported at the end of the trip, and red lights, which require the vehicle to be stopped as soon as it is safe.

Wheel nuts are checked by the maintenance team after any wheel change and again after the next 100 km of service. Tyres are replaced when tread depth reaches the limit set by the maintenance planning system, and regrooved tyres are never fitted to the front axle. Interior cleaning is carried out every night, with a deep clean every 28 days.

Passenger information screens are updated automatically each night at the depot. If a screen is faulty the driver must make route announcements by voice. All vehicles carry a fire extinguisher, a first aid kit, a high-visibility vest and an emergency hammer at each marked exit.

3.8 Vehicle class AT-1V

Class AT-1V is a accessible minivan for on-demand services. Class AT-1V entered service in 2021. Class AT-1V seats 8 passengers and carries up to 0 standing passengers. The overall length of class AT-1V is 5.9 metres. The energy system of class AT-1V is electric, 74 kWh battery.

Class AT-1V receives a scheduled inspection every 20000 km. Brake overhaul on class AT-1V takes place every 60000 km. Scheduled inspections are booked through the maintenance planning system and take priority over service allocation when a vehicle is within 500 km of its limit.

Drivers may operate a vehicle class only after completing the training listed for it in Part 6. The driver’s cab has a seat adjustment guide on the door pillar, and drivers should adjust the seat and mirrors before moving off. Warning lights on the dashboard are grouped into amber lights, which must be reported at the end of the trip, and red lights, which require the vehicle to be stopped as soon as it is safe.

Wheel nuts are checked by the maintenance team after any wheel change and again after the next 100 km of service. Tyres are replaced when tread depth reaches the limit set by the maintenance planning system, and regrooved tyres are never fitted to the front axle. Interior cleaning is carried out every night, with a deep clean every 28 days.

Passenger information screens are updated automatically each night at the depot. If a screen is faulty the driver must make route announcements by voice. All vehicles carry a fire extinguisher, a first aid kit, a high-visibility vest and an emergency hammer at each marked exit.

4.1 Pay grades

Hourly rates apply from 1 January 2027 and are paid every four weeks into the employee’s nominated account.

Grade G1 hourly rate: $18.40.

Grade G2 hourly rate: $20.15.

Grade G3 hourly rate: $22.30.

Grade G4 hourly rate: $24.60.

Grade G5 hourly rate: $27.05.

Grade G6 hourly rate: $29.80.

Grade G7 hourly rate: $33.25.

Grade G8 hourly rate: $37.90.

Employees move up one pay grade after completing the qualifying service and any training required for the higher grade. Pay statements are available on the staff portal three working days before payment.

4.2 Overtime

Overtime is any time worked beyond the rostered shift and must be approved by the duty controller.

The first 4 hours of overtime in a week are paid at 1.5 times the hourly rate.

Overtime beyond the first 4 hours in a week is paid at 2 times the hourly rate.

Time off in lieu may be chosen instead of overtime pay and must be taken within 8 weeks. No employee may work more than 12 hours of overtime in a single week without written approval from the depot manager.

4.3 Shift premiums

A Sunday premium of $4.75 per hour is paid for all hours worked on a Sunday.

A night premium of $2.40 per hour is paid for hours worked between 22:00 and 05:00.

A split-shift allowance of $11.50 is paid for each duty with an unpaid break of more than 2 hours.

Premiums are added to the hourly rate after overtime is calculated and are not themselves multiplied.

4.4 Annual leave

Employees with less than 5 years of service receive 25 days of annual leave.

Employees with 5 to 14 years of service receive 28 days of annual leave.

Employees with 15 or more years of service receive 32 days of annual leave.

Leave requests for the summer period must be made by 31 March. Up to 5 unused days may be carried into the next leave year with the approval of the depot manager.

4.5 Sickness absence

Employees must notify the duty controller no later than 90 minutes before the start of a rostered shift when absent through illness.

A doctor’s certificate is required for any absence longer than 7 calendar days.

Full sick pay is paid for the first 13 weeks of absence in any rolling 12 months.

Half pay is paid for the following 13 weeks. A return-to-work conversation takes place on the first day back.

4.6 Family leave

Parental leave is 16 weeks at full pay for any employee with at least 12 months of service.

Bereavement leave is 5 days for a close family member.

Carers may take up to 10 days of unpaid leave in any calendar year. Requests are made through the staff portal and are treated confidentially by the human resources team.

4.7 Pension

Employees contribute 7% of pensionable pay to the pension plan.

Ashgrove Regional Transit contributes 9% of pensionable pay.

Employees join automatically after 3 months of service and may opt out in writing at any time. Benefit statements are issued each June.

4.8 Uniform

New employees receive two shirts, two pairs of trousers and one jacket.

Uniform items are replaced every 24 months or sooner if damaged at work.

Safety boots are provided for depot staff and maintenance technicians. Uniform must be returned when employment ends.

4.9 Expenses

Meal allowance of $14.00 is paid when a duty keeps an employee away from the home depot for more than 10 hours.

Mileage for approved travel in a private car is paid at $0.62 per km.

Expense claims must be submitted within 60 days through the staff portal, with receipts attached for anything over $25.00.

4.10 Free travel

Employees travel free on all Ashgrove services on production of a staff pass.

One nominated household member receives a companion pass after 2 years of service.

Passes are the property of the company and must be surrendered on leaving. Misuse of a pass is a disciplinary matter under Part 8.

5.1 Procedure SR-402: Flooded roads

Under procedure SR-402: Do not enter standing water deeper than 15 centimetres.

Also under procedure SR-402: Report the location to the control room and wait for a diversion instruction.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.2 Procedure SR-405: Snow and ice

Under procedure SR-405: Reduce speed to no more than 30 km/h on untreated roads.

Also under procedure SR-405: Fit chains only at a designated stopping place with hazard lights on.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.3 Procedure SR-409: Vehicle fire

Under procedure SR-409: Evacuate all passengers to a point at least 50 metres upwind of the vehicle.

Also under procedure SR-409: Use the extinguisher only if the fire is small and an exit stays clear behind you.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.4 Procedure SR-412: Fuel spills

Under procedure SR-412: Contain any spill larger than 5 litres with the absorbent kit from the depot store.

Also under procedure SR-412: Notify the environmental coordinator within 30 minutes of the spill.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.5 Procedure SR-417: High winds

Under procedure SR-417: Double-deck vehicles must stop crossing exposed bridges when gusts exceed 85 km/h.

Also under procedure SR-417: Single-deck services may continue on those bridges until gusts exceed 110 km/h.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.6 Procedure SR-421: Passenger medical emergency

Under procedure SR-421: Stop at the nearest safe place and call the control room on Channel 2.

Also under procedure SR-421: Automatic defibrillators are carried on every AT-8X and AT-7C vehicle.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.7 Procedure SR-423: Battery thermal event

Under procedure SR-423: Move at least 75 metres away from any electric vehicle showing battery smoke.

Also under procedure SR-423: Isolation may be carried out only by a technician who has completed TR-211.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.8 Procedure SR-428: Aggressive passengers

Under procedure SR-428: Do not attempt physical removal of a passenger under any circumstances.

Also under procedure SR-428: Press the silent alarm and keep the doors unlocked unless told otherwise by police.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.9 Procedure SR-431: Lone working at night

Under procedure SR-431: Staff working alone after 22:00 must check in with the controller every 60 minutes.

Also under procedure SR-431: A missed check-in triggers a welfare call within 10 minutes.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.10 Procedure SR-436: Collisions

Under procedure SR-436: Photograph the scene and record the names of all witnesses before moving the vehicle.

Also under procedure SR-436: The driver must complete form IR-7 before the end of the shift.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.11 Procedure SR-440: Pedestrian strike

Under procedure SR-440: Keep the vehicle in position and do not move it unless police instruct you to.

Also under procedure SR-440: A trained peer supporter is offered to the driver within 24 hours.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.12 Procedure SR-444: Hazardous items on board

Under procedure SR-444: Refuse carriage of any fuel container larger than 5 litres.

Also under procedure SR-444: Unattended bags are reported using the code word Harbour on Channel 1.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.13 Procedure SR-449: Wheelchair ramp failure

Under procedure SR-449: Manually deploy the ramp using the release lever under the floor panel.

Also under procedure SR-449: The vehicle must be taken out of service at the end of that trip.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.14 Procedure SR-453: Depot vehicle movements

Under procedure SR-453: High-visibility clothing is mandatory at all times in every depot yard.

Also under procedure SR-453: Pedestrians have priority on the marked green walkways.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.15 Procedure SR-458: Charging equipment faults

Under procedure SR-458: Never unplug a connector that shows a red fault light.

Also under procedure SR-458: Press the emergency stop and call the energy desk on extension 4190.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

5.16 Procedure SR-462: Heat stress

Under procedure SR-462: Cab temperatures above 32 degrees Celsius must be reported to the controller.

Also under procedure SR-462: Drivers are allowed an extra 10 minute cooling break on such days.

Every employee must know where this procedure applies and must follow it without waiting for instructions when immediate action is needed. As soon as it is safe to do so, tell the control room what has happened, where you are, and whether anyone has been hurt.

The control room records the time of the call and decides whether to send a supervisor, stop other services, or contact the emergency services. Do not speak to the media or post about the event on social media. Refer all questions to the communications team.

After the event, the depot safety officer reviews what happened and decides whether a formal investigation is required under Part 8. Lessons learned are shared at the next depot safety meeting so that other teams can benefit from them.

Employees are protected from blame when they stop work in good faith because they believed there was a serious risk. Concerns can also be raised confidentially with any safety officer or through the staff portal.

6.1 Training courses

Course TR-101: Induction and network knowledge

Course TR-101 lasts 5 days. Course TR-101 is required for: Every new employee. This course has no renewal.

Courses are booked through the staff portal by the depot manager, and attendance counts as paid working time. Employees who miss a booked course without good reason may be removed from duties that depend on it.

Certificates are recorded in the training register, and reminders are sent 90 days before a renewal falls due. An employee whose certificate has expired may not carry out the related duties until it has been renewed.

Trainers assess every candidate on both practical skill and written understanding. A candidate who does not pass may repeat the assessment once without charge after further coaching.

6.2 Training courses

Course TR-118: Customer care and conflict awareness

Course TR-118 lasts 2 days. Course TR-118 is required for: All customer-facing staff. Course TR-118 must be renewed every 3 years.

Course TR-126: Accessible travel awareness

Course TR-126 lasts 1 day. Course TR-126 is required for: All drivers and inspectors. Course TR-126 must be renewed every 2 years.

Courses are booked through the staff portal by the depot manager, and attendance counts as paid working time. Employees who miss a booked course without good reason may be removed from duties that depend on it.

Certificates are recorded in the training register, and reminders are sent 90 days before a renewal falls due. An employee whose certificate has expired may not carry out the related duties until it has been renewed.

Trainers assess every candidate on both practical skill and written understanding. A candidate who does not pass may repeat the assessment once without charge after further coaching.

6.3 Training courses

Course TR-140: Defensive driving

Course TR-140 lasts 3 days. Course TR-140 is required for: All drivers. Course TR-140 must be renewed every 4 years.

Courses are booked through the staff portal by the depot manager, and attendance counts as paid working time. Employees who miss a booked course without good reason may be removed from duties that depend on it.

Certificates are recorded in the training register, and reminders are sent 90 days before a renewal falls due. An employee whose certificate has expired may not carry out the related duties until it has been renewed.

Trainers assess every candidate on both practical skill and written understanding. A candidate who does not pass may repeat the assessment once without charge after further coaching.

6.4 Training courses

Course TR-203: Electric vehicle operation

Course TR-203 lasts 4 days. Course TR-203 is required for: Drivers rostered on AT-5E, AT-7C or AT-8X. Course TR-203 must be renewed every 5 years.

Course TR-211: High-voltage isolation

Course TR-211 lasts 6 days. Course TR-211 is required for: Maintenance technicians. Course TR-211 must be renewed every 2 years.

Courses are booked through the staff portal by the depot manager, and attendance counts as paid working time. Employees who miss a booked course without good reason may be removed from duties that depend on it.

Certificates are recorded in the training register, and reminders are sent 90 days before a renewal falls due. An employee whose certificate has expired may not carry out the related duties until it has been renewed.

Trainers assess every candidate on both practical skill and written understanding. A candidate who does not pass may repeat the assessment once without charge after further coaching.

6.5 Training courses

Course TR-218: First aid at work

Course TR-218 lasts 3 days. Course TR-218 is required for: At least one person per shift in every depot. Course TR-218 must be renewed every 3 years.

Courses are booked through the staff portal by the depot manager, and attendance counts as paid working time. Employees who miss a booked course without good reason may be removed from duties that depend on it.

Certificates are recorded in the training register, and reminders are sent 90 days before a renewal falls due. An employee whose certificate has expired may not carry out the related duties until it has been renewed.

Trainers assess every candidate on both practical skill and written understanding. A candidate who does not pass may repeat the assessment once without charge after further coaching.

6.6 Training courses

Course TR-305: Heavy lift hoist operator

Course TR-305 lasts 2 days. Course TR-305 is required for: Technicians working in Marlstone Bay 40. Course TR-305 must be renewed every 18 months.

Course TR-322: Articulated vehicle conversion

Course TR-322 lasts 7 days. Course TR-322 is required for: Drivers moving to the AT-7C. This course has no renewal.

Courses are booked through the staff portal by the depot manager, and attendance counts as paid working time. Employees who miss a booked course without good reason may be removed from duties that depend on it.

Certificates are recorded in the training register, and reminders are sent 90 days before a renewal falls due. An employee whose certificate has expired may not carry out the related duties until it has been renewed.

Trainers assess every candidate on both practical skill and written understanding. A candidate who does not pass may repeat the assessment once without charge after further coaching.

6.7 Training courses

Course TR-340: Duty controller certificate

Course TR-340 lasts 10 days. Course TR-340 is required for: Staff promoted to duty controller. Course TR-340 must be renewed every 3 years.

Courses are booked through the staff portal by the depot manager, and attendance counts as paid working time. Employees who miss a booked course without good reason may be removed from duties that depend on it.

Certificates are recorded in the training register, and reminders are sent 90 days before a renewal falls due. An employee whose certificate has expired may not carry out the related duties until it has been renewed.

Trainers assess every candidate on both practical skill and written understanding. A candidate who does not pass may repeat the assessment once without charge after further coaching.

6.8 Training courses

Course TR-355: Incident investigation

Course TR-355 lasts 4 days. Course TR-355 is required for: Safety officers and depot managers. Course TR-355 must be renewed every 5 years.

Course TR-410: Coach handling for airport services

Course TR-410 lasts 2 days. Course TR-410 is required for: Drivers rostered on Route 27. Course TR-410 must be renewed every 4 years.

Courses are booked through the staff portal by the depot manager, and attendance counts as paid working time. Employees who miss a booked course without good reason may be removed from duties that depend on it.

Certificates are recorded in the training register, and reminders are sent 90 days before a renewal falls due. An employee whose certificate has expired may not carry out the related duties until it has been renewed.

Trainers assess every candidate on both practical skill and written understanding. A candidate who does not pass may repeat the assessment once without charge after further coaching.

7.1 Fare zones

The network is divided into 4 fare zones.

A single adult fare within one zone costs $2.30.

A single adult fare across two zones costs $3.10.

A single adult fare across three zones costs $3.85.

A single adult fare across all four zones costs $4.60.

Airport Route 27 has a separate flat fare of $9.50.

7.2 Passes

A day pass valid in all zones costs $8.20.

A weekly pass valid in all zones costs $31.00.

A monthly pass valid in all zones costs $112.00.

Passes are valid on all routes except Route 27, which needs an airport supplement of $5.00. Passes are loaded onto a travel card or the Ashgrove app.

7.3 Concessions

Children under 5 travel free with a fare-paying adult.

Passengers aged 5 to 15 pay 50% of the adult fare.

Passengers aged 65 or over travel free after 09:30 on weekdays and all day at weekends.

Registered students receive 25% off weekly and monthly passes. Concession holders must show a valid card when asked.

7.4 Penalty fares

The penalty fare for travelling without a valid ticket is $60.

The penalty fare is reduced to $30 when paid within 14 days.

Inspectors must issue a written notice and must not ask for cash on the vehicle. Appeals are made in writing within 21 days to the revenue protection office.

7.5 Refunds and lost property

Unused monthly passes are refunded in full if returned within 7 days of purchase.

Items left on vehicles are kept at the Central Station lost property office for 28 days.

Unclaimed items are donated to charity or disposed of securely after that period. Perishable items are thrown away at the end of the working day.

7.6 Cash handling

Drivers may accept cash only up to $20 for any single fare payment.

Cash floats of $40 are issued at the start of each duty and paid in at the end of it.

Differences of more than $5 are investigated by the revenue office. Drivers must not give credit or accept foreign currency.

8.1 Incident reporting

All incidents are reported on form IR-7 before the end of the shift.

Near misses are reported on form NM-2 within 48 hours.

Injuries needing hospital treatment must be phoned to the safety director within 1 hour.

Records of these matters are kept securely by the human resources team and are available only to those who need them to carry out their duties. Employees may ask to see the records held about them at any time.

8.2 Investigation

Formal investigations must be completed within 30 calendar days.

An employee may be accompanied by a colleague or union representative at any investigation meeting.

Findings are shared with the employee in writing within 5 working days of completion.

Records of these matters are kept securely by the human resources team and are available only to those who need them to carry out their duties. Employees may ask to see the records held about them at any time.

8.3 Disciplinary warnings

A first written warning stays on file for 12 months.

A final written warning stays on file for 24 months.

Dismissal may follow a further offence during the life of a final written warning.

Records of these matters are kept securely by the human resources team and are available only to those who need them to carry out their duties. Employees may ask to see the records held about them at any time.

8.4 Appeals

An appeal against any disciplinary decision must be lodged within 10 working days.

Appeals are heard by a manager who has had no earlier involvement in the case.

The outcome of the appeal is final and is given in writing.

Records of these matters are kept securely by the human resources team and are available only to those who need them to carry out their duties. Employees may ask to see the records held about them at any time.

8.5 Alcohol and drugs

The alcohol limit for all safety-critical staff is 0.2 grams per litre of blood.

Random testing is carried out on at least 10% of safety-critical staff each year.

Testing also takes place after any collision that causes injury.

Records of these matters are kept securely by the human resources team and are available only to those who need them to carry out their duties. Employees may ask to see the records held about them at any time.

8.6 Mobile devices

Drivers must not use a handheld phone while in the cab, even when the vehicle is stationary at a stop.

Phones must be switched to silent and stored in the driver’s bag during a duty.

A breach is treated as a serious offence.

Records of these matters are kept securely by the human resources team and are available only to those who need them to carry out their duties. Employees may ask to see the records held about them at any time.

8.7 Driving hours

Drivers may not drive for more than 4 hours and 30 minutes without a break of at least 30 minutes.

The maximum driving time in any one duty is 9 hours.

A minimum rest of 11 hours is required between duties.

Records of these matters are kept securely by the human resources team and are available only to those who need them to carry out their duties. Employees may ask to see the records held about them at any time.

8.8 Grievances

A grievance should first be raised informally with the employee’s line manager.

A formal grievance receives a written response within 15 working days.

Grievances about a line manager are handled by the depot manager of another depot.

Records of these matters are kept securely by the human resources team and are available only to those who need them to carry out their duties. Employees may ask to see the records held about them at any time.

9.1 Amendment 1

Amendment 1 takes effect from 1 February 2027.

Amendment 1 changes the deep clean cycle for electric vehicles.

Electric vehicles now receive a deep clean every 21 days instead of every 28 days.

All amendments in this part replace any conflicting text elsewhere in this manual, and depot managers must brief their teams within 14 days of an amendment taking effect.

9.2 Amendment 2

Amendment 2 takes effect from 1 March 2027.

Amendment 2 replaces the night premium in section 4.3.

The night premium is now $3.10 per hour instead of the earlier rate.

The change applies to all hours worked between 22:00 and 05:00 on or after the effective date, and no back pay is due for earlier periods.

9.3 Amendment 3

Amendment 3 takes effect from 1 April 2027.

Amendment 3 replaces the penalty fare in section 7.4.

The penalty fare for travelling without a valid ticket is now $75, or $40 when paid within 14 days.

Notices issued before the effective date remain payable at the amounts printed on them, and inspectors have been issued with new notice books.
